Crop Production

Iowa: Corn: The September 1 yield forecast of 187.0 bushels per acre is up 2 bushels from the August 1 forecast. Production is forecast at 2.50 billion bushels for the state, up 14 percent from last year. Iowa's corn plant population per acre, at 29,500, and number of ears per acre, at 29,250, are at record high levels. If realized, Iowa's corn yield and production would be record highs.

Soybean: The September 1 yield forecast of 52.0 bushels per acre is unchanged from the August 1 forecast but up 6 bushels per acre from 2008. If realized, soybean production would be 506 million bushels, up nearly 14 percent from last year's 445 million bushels.

United States: Corn production is forecast at 13.0 billion bushels, up 2 percent from last month and 7 percent higher than 2008. Based on conditions as of September 1, yields are expected to average 161.9 bushels per acre, up 2.4 bushels from August and 8.0 bushels above last year. If realized, this will be the highest yield on record and production will be the second largest, behind 2007. Yield forecasts increased from last month across the western Corn Belt and the northern half of the Great Plains as mild temperatures and adequate soil moisture supplies

provided favorable growing conditions. Yield prospects were unchanged in the eastern Corn Belt where dry conditions during August depleted soil moisture supplies.

Soybean production is forecast at a record high 3.25 billion bushels, up 1 percent from the August forecast and up 10 percent from last year. Based on September 1 conditions, yields are expected to average 42.3 bushels per acre, up 0.6 bushel from last month and up 2.7 bushels from 2008. If realized, this will be the third highest yield on record. Compared with last month, yields are forecast higher or unchanged in all States except Indiana, where the yield is expected to be down 2 bushels. The largest increases in yield from the August forecast are expected in Alabama and Maryland, up 5 and 6 bushels, respectively. If realized, the forecasted yield in Alabama, Georgia, and Mississippi will be a record high and the forecasted yield in Nebraska, North Carolina, and Ohio will tie the previous record high. Area for harvest in the U.S. is forecast at 76.8 million acres, up slightly from June and up 3 percent from 2008.

September 2009 Production Summary - Iowa and United States

Crop	For Harvest		Yield per acre		Production
